AWS Task-1

Task Description:

Create a windows Vm machine in AWS and connect with RDP open CMD in windows share the about system info.

Techstacks needs to be used :

- AWS EC2 (windows)
- RDP (Preavailable in Windows)

How do I submit my work?

- Push all your work files to GitHub (O/P screenshot images must).
- Submit your URLs in the portal.

Terms and Conditions?

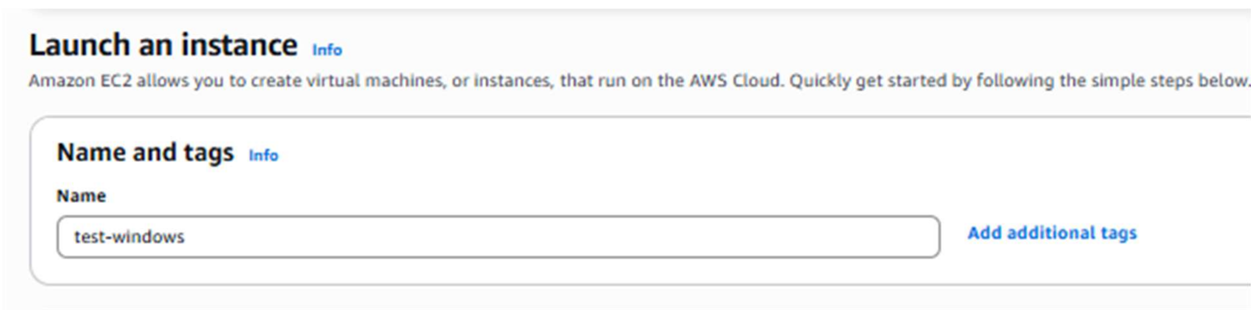
- You agree to not share this confidential document with anyone.
- You agree to open-source your code (it may even look good on your profile!). Do not mention our company's name anywhere in the code.
- We will never use your source code under any circumstances for any commercial purposes; this is just a basic assessment task.

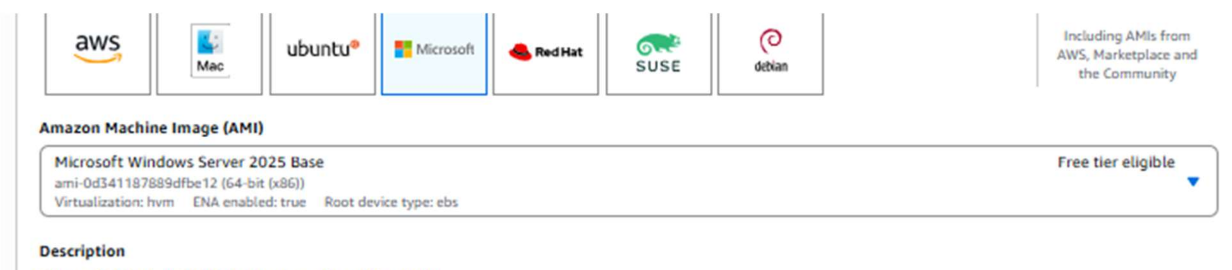
NOTE: Any violation of Terms and conditions is strictly prohibited. You are bound to adhere to it.

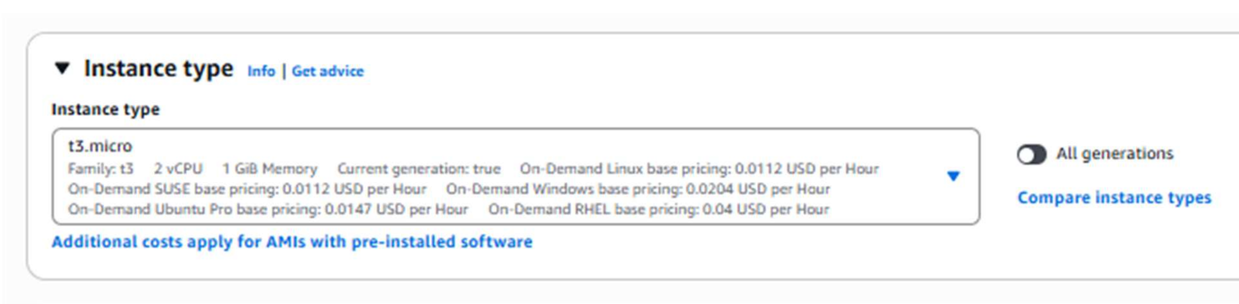
Solution

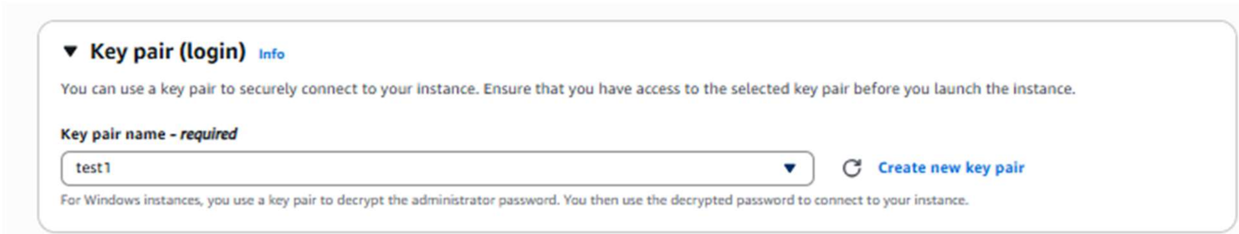
Step 1: Launch Windows EC2 Instance

- Open AWS Management Console → EC2 → Launch Instance.
- Selected **Windows Server 2025 base**.
- Chose t3. micro instance (Free-tier eligible).
- Configured key pair and security group (allowed my IP RDP - port 3389).
- Launched the instance.









Key pair (login) Info
You can use a key pair to securely connect to your instance. Ensure that you have access to the selected key pair before you launch the instance.
Key pair name - required
test1
Create new key pair
For Windows instances, you use a key pair to decrypt the administrator password. You then use the decrypted password to connect to your instance.

Firewall (security groups) Info
A security group is a set of firewall rules that control the traffic for your instance. Add rules to allow specific traffic to reach your instance.
Create security group
Select existing security group
We'll create a new security group called 'launch-wizard-3' with the following rules:
Allow RDP traffic from
Helps you connect to your instance
My IP
27.7.50.22/32
Allow HTTPS traffic from the internet
To set up an endpoint, for example when creating a web server
Allow HTTP traffic from the internet
To set up an endpoint, for example when creating a web server

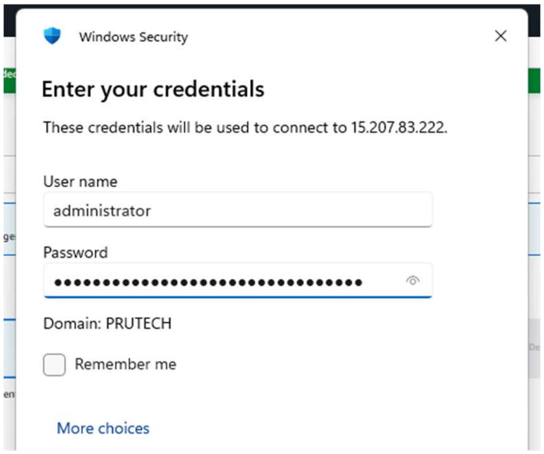
Connect Info
Connect to an instance using the browser-based client.
Session Manager
RDP client
EC2 serial console
Record RDP connections
You can now record RDP connections using AWS Systems Manager just-in-time node access. Learn more
Instance ID
i-072bb399feeaf3153 (test-windows)
Connection Type
Connect using RDP client
Download a file to use with your RDP client and retrieve your password.
Connect using Fleet Manager
You can connect to your Windows instance using a remote desktop client of your choice, and by downloading and running the RDP shortcut file below:
Download remote desktop file
When prompted, connect to your instance using the following username and password:
Public DNS
ec2-15-207-83-222.ap-south-1.compute.amazonaws.com
Username Info
Administrator
Password copied
tp1t4s4k1jk9oaljbM;J.wY=jwT3KnM&
If you've joined your instance to a directory, you can use your directory credentials to connect to your instance.

Step 2: Connect to Instance via RDP

- Retrieved administrator password from AWS EC2 console using .pem key.
- Connected to the instance using **RDP client** with the public IPv4 address.



Step 3: Open Command Prompt and Check System Info

- After successful RDP connection, opened **Command Prompt**
