

File Creation Task - Sudir

Task Description:

Create a directory called `my_folder`, navigate into it, and create a file named `my_file.txt` with some text. Then, create another file named `another_file.txt` with some text. Concatenate the content of `another_file.txt` to `my_file.txt` and display the updated content. Finally, list all files and directories in the current directory.

Create 20 files with `.txt` extensions and rename the first 5 files to `.yaml` extension and Print the latest created top 5 files among the total no of files".

Techstacks needs to be used :

Shell (AWS, Gitbash, WSL, Vbox)

How do I submit my work?

Push all your work files to GitHub (O/P screenshot images must).

Submit your URLs in the portal.

Terms and Conditions?

You agree to not share this confidential document with anyone.

You agree to open-source your code (it may even look good on your profile!). Do not mention our company's name anywhere in the code.

We will never use your source code under any circumstances for any commercial purposes; this is just a basic assessment task.

NOTE: Any violation of Terms and conditions is strictly prohibited. You are bound to adhere to it.

Solution

Step 1: Create a directory called ""my_folder"", navigate into it

```
sudir@linuxpractice:~$ mkdir my_folder
sudir@linuxpractice:~$ ll | grep my_folder/
drwxrwxr-x 2 sudir sudir 4096 Jun 19 18:41 my_folder/
sudir@linuxpractice:~$ cd my_folder/
sudir@linuxpractice:~/my_folder$ ll
total 8
drwxrwxr-x 2 sudir sudir 4096 Jun 19 18:41 ./
drwxr-x--- 6 sudir sudir 4096 Jun 19 18:41 ../
sudir@linuxpractice:~/my_folder$
```

Step 2:

create a file named ""my_file.txt"" with some text. Then, create another file named ""another_file.txt"" with some text

```
sudir@linuxpractice:~/my_folder$ echo "hi myself sudir pandian" > my_file.txt
sudir@linuxpractice:~/my_folder$ ls
my_file.txt
sudir@linuxpractice:~/my_folder$ cat my_file.txt
hi myself sudir pandian
sudir@linuxpractice:~/my_folder$ vim another_file.txt
sudir@linuxpractice:~/my_folder$ cat another_file.txt
this is my first task "File creation".
sudir@linuxpractice:~/my_folder$ ls
another_file.txt  my_file.txt
sudir@linuxpractice:~/my_folder$ ll
total 16
drwxrwxr-x 2 sudir sudir 4096 Jun 19 18:52 ./
drwxr-x--- 6 sudir sudir 4096 Jun 19 18:52 ../
-rw-rw-r-- 1 sudir sudir  41 Jun 19 18:52 another_file.txt
-rw-rw-r-- 1 sudir sudir  24 Jun 19 18:50 my_file.txt
sudir@linuxpractice:~/my_folder$
```

Step 3:

Concatenate the content of ""another_file.txt"" to ""my_file.txt"" and display the updated content. Finally, list all files and directories in the current directory.

```
sudir@linuxpractice:~/my_folder$ cat another_file.txt >> my_file.txt
sudir@linuxpractice:~/my_folder$ cat my_file.txt
hi myself sudir pandian
this is my first task "File creation".
sudir@linuxpractice:~/my_folder$ ls -l
total 8
-rw-rw-r-- 1 sudir sudir 41 Jun 19 18:52 another_file.txt
-rw-rw-r-- 1 sudir sudir 65 Jun 19 18:55 my_file.txt
sudir@linuxpractice:~/my_folder$
```

Solution: Second question

Step1:

Create 20 files with .txt extensions

```
sudoir@linuxpractice:~/my_folder/secondtask$ ls
sudoir@linuxpractice:~/my_folder/secondtask$ touch example{1..20}.txt
sudoir@linuxpractice:~/my_folder/secondtask$ ls
example10.txt example12.txt example14.txt example16.txt example18.txt example1.txt example2.txt example4.txt example6.txt example8.txt
example11.txt example13.txt example15.txt example17.txt example19.txt example20.txt example3.txt example5.txt example7.txt example9.txt
sudoir@linuxpractice:~/my_folder/secondtask$
```

Step2:

rename the first 5 files to .yaml extension and Print the latest created top 5 files among the total no of files"

This is manual rename method, which doesn't change modification time. Scroll down for script method.

```
sudoir@linuxpractice:~/my_folder$ mkdir secondtask
sudoir@linuxpractice:~/my_folder$ cd secondtask/
sudoir@linuxpractice:~/my_folder/secondtask$ ls
sudoir@linuxpractice:~/my_folder/secondtask$ touch example{1..20}.txt
sudoir@linuxpractice:~/my_folder/secondtask$ ls
example10.txt example14.txt example18.txt example2.txt example6.txt
example11.txt example15.txt example19.txt example3.txt example7.txt
example12.txt example16.txt example1.txt example4.txt example8.txt
example13.txt example17.txt example20.txt example5.txt example9.txt
sudoir@linuxpractice:~/my_folder/secondtask$ mv example1.txt example1.yaml
sudoir@linuxpractice:~/my_folder/secondtask$ mv example2.txt example2.yaml
sudoir@linuxpractice:~/my_folder/secondtask$ mv example3.txt example3.yaml
sudoir@linuxpractice:~/my_folder/secondtask$ mv example4.txt example4.yaml
sudoir@linuxpractice:~/my_folder/secondtask$ mv example5.txt example5.yaml
sudoir@linuxpractice:~/my_folder/secondtask$ ls
example10.txt example14.txt example18.txt example2.yaml example6.txt
example11.txt example15.txt example19.txt example3.yaml example7.txt
example12.txt example16.txt example1.yaml example4.yaml example8.txt
example13.txt example17.txt example20.txt example5.yaml example9.txt
sudoir@linuxpractice:~/my_folder/secondtask$ ls -lt | head -n 5
total 0
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:19 example10.txt
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:19 example11.txt
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:19 example12.txt
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:19 example13.txt
sudoir@linuxpractice:~/my_folder/secondtask$
```

This is a script method, which gives the exact output of the question.

for i in {1..5}; do mv "example\$i.txt" "example\$i.yml"; touch "example\$i.yml"; done

touch "example\$i.yml" updates the timestamp of the renamed files

Note

It doesn't change or erase the file content.

```
sudir@linuxpractice:~/my_folder$ mkdir scriptmethod
sudir@linuxpractice:~/my_folder$ cd scriptmethod/
sudir@linuxpractice:~/my_folder/scriptmethod$ touch example{1..20}.txt
sudir@linuxpractice:~/my_folder/scriptmethod$ ls
example10.txt  example14.txt  example18.txt  example2.txt  example6.txt
example11.txt  example15.txt  example19.txt  example3.txt  example7.txt
example12.txt  example16.txt  example1.txt   example4.txt  example8.txt
example13.txt  example17.txt  example20.txt  example5.txt  example9.txt
sudir@linuxpractice:~/my_folder/scriptmethod$ for i in {1..5}; do mv "example$i.txt" "example$i.yml"; touch "example$i.yml"; done
sudir@linuxpractice:~/my_folder/scriptmethod$ ls
example10.txt  example14.txt  example18.txt  example2.yml  example6.txt
example11.txt  example15.txt  example19.txt  example3.yml  example7.txt
example12.txt  example16.txt  example1.yml   example4.yml  example8.txt
example13.txt  example17.txt  example20.txt  example5.yml  example9.txt
sudir@linuxpractice:~/my_folder/scriptmethod$ ls -lt | head -n 5
total 0
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example5.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example4.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example3.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example2.yml
sudir@linuxpractice:~/my_folder/scriptmethod$ ls -lt | head -n 6
total 0
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example5.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example4.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example3.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example2.yml
-rw-rw-r-- 1 sudir sudir 0 Jun 19 19:36 example1.yml
sudir@linuxpractice:~/my_folder/scriptmethod$
```
