

AWS Task-2 – Sudir Pandian

Task Description:

Set up a VPC with an Internet gateway, create a public subnet with 256 IP addresses, a private subnet with 256 IP addresses, make a route table connecting the Internet gateway and the subnets, and launch a Linux EC2 instance by using the above VPC and public subnet.

Techstacks needs to be used :

- AWS VPC
- AWS EC2

How do I submit my work?

- Push all your work files to GitHub (O/P screenshot images must).
- Submit your URLs in the portal.

Terms and Conditions?

- You agree to not share this confidential document with anyone.
- You agree to open-source your code (it may even look good on your profile!). Do not mention our company's name anywhere in the code.
- We will never use your source code under any circumstances for any commercial purposes; this is just a basic assessment task.

NOTE: Any violation of Terms and conditions is strictly prohibited. You are bound to adhere to it.

Step 1. VPC Creation

- Created a VPC named **Task2-VPC** with CIDR block 10.0.0.0/16 (default tenancy).

☐	GUVI	vpc-0ba4e238a87f9f809	Available	Off	10.0.0.0/16	-	dopt-0391ebc22cfd24bb
--------------------------	------	---------------------------------------	------------------------	------------------	-------------	---	---------------------------------------

Step 2. Internet Gateway

- Created an Internet Gateway (**GUVI**) and attached it to the VPC.

☐	GUVI	igw-0099b88bf3b6db0ba	Detached	-	214745598598
--------------------------	------	---------------------------------------	-----------------------	---	--------------

Step 3. Subnets

- Public Subnet:** 10.0.1.0/24 (256 total IPs), placed in ap-south-1a.
- Private Subnet:** 10.0.2.0/24 (256 total IPs), placed in ap-south-1b.

You have successfully created 2 subnets: subnet-0c386f6abc91efc21, subnet-0ece502db52e3e634

Step 4. Route Tables

- **Public Route Table (Public-RT):**
 - Added route 0.0.0.0/0 → Internet Gateway.
 - Associated with Public Subnet.
- **Private Route Table (Private-RT):**
 - Default local route only (no internet access).
 - Associated with Private Subnet.

Step 5. EC2 Deployment

- Launched an Amazon Linux 2023 t2.micro instance named **Test-Task2** in the Public Subnet.
- Enabled **Auto-assign Public IP**.
- Security Group:
 - SSH allowed from my IP.
 - HTTP allowed for testing if required.
